The present invention describes primer sets for synthesising 5602

(c) full-length cDNAs defined in the specification. Where a primer set

(c) comprises: (a) an oligo-dr primer and an oligonuclectide complementary

(c) comprises strand of a polynucleotide which comprises one of

(c) the 5602 nucleotide sequences defined in the specification, where the

(c) complementary strand of a polynucleotide which comprises one of

(c) of an oligonucleotide comprising a sequence complementary to the

(c) of an oligonucleotide comprising a sequence complementary to the

(c) oplynucleotide which comprises a 5'-end

(c) oplynucleotide which comprises a 1'-end sequence complementary to a

(c) sequence and an oligonucleotide comprising a sequence, where the

(c) oplynucleotide which comprises at least 15 nucleotides and the combination of

(c) oligonucleotide which comprises at least 15 nucleotides and the combination of

(c) oligonucleotide which captures at least 15 nucleotides and the combination of

(c) oligonucleotide of a primer sets can be used in antisense therapy and

(c) oligonucleotide of aliagnosis of the primers are also useful for the primers encoded by

(c) of an oligonucleotides of the primers and the combination of the full-length cDNAs. The primers allow obtaining of the proteins encoded by

(c) of an oligonucleotides of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length of AAH13628 and

(c) AAH13631 to AAH13742 represent human amino acid sequences; and AAH3629 to AAH13632

(c) AAB5893 represent human amino acid sequences; and AAH31823 to AAH13632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PVNDGFQALQGIIHSILKKSCIEILAAEPSTICAGESFQVVVRGNGFRHARNVDRVLCSF 180

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, the encoded polypeptides (AAM38642-AAM42213) with nootropic, cc immunosuppressant and cytostatic activity. The polynucleotides are useful immunosuppressant and cytostatic activity. The polynucleotide or polynucleotide in gene therapy. A composition containing a polypeptide or polynucleotide or polynucleotide in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous coff the invention may be used to treat of diseases of the peripheral nervous coff collised neuropathies and central nervous system diseases, and sacrophic collised neuropathies and central nervous system diseases, and streat collised the activity, of the collised of the activity, cancer diagnosis and therapy, drug screening, cand thrombolytic activity, arthritis and inflammation, leukaemias and collised of the coll
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, postriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chisease, osteoarthritis, Lyme's disease, cachexia and autoimmune diseases e.g. myasthemia gravis, autoimmune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial CTANGO-128, 140, 197, 213, 214, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, paramacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a clisorder associated with aberrant TANGO expression. A wide range of cellular disorders can be treated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TANGO, 128; 140; 197; 212; 213; 224; 239; modulating agent; asthma; graft versus-host diseases; rheumatoid arthritis; psoriasis; inflammatory bowel disease; septic shock; ulcerative colitis; Crohn's disease; chronic myelogenous leukemia; cancer; liver disease; Hodgkin's disease; osteoarthritis; Lyme's disease; cachexia; autoimmune disease; myasthemia gravis; autoimmune diabetes; systemic lupus erythematosus; transgenic animal; diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVGVKDFNETQLARIADSKDHVF 120

AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted protein genes, and AAE01436-AAE01513 represent the proteins they encode. AAE01514-AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes are described for gene amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the metations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the mutations, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; secreted protein; proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoletic disorder; immune system disorder; AlbS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer; sidsease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; endocrine disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy; binding partner identification; chromosome 19.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human gene 4 encoded secreted protein HWLFR02, SEQ ID NO:94.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ni J;

skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, anglogenic disorders, kidney disorders, cardiovascular disorders, anglogenic disorders, kidney disorders, cardioratinal disorders, pregnancy-related disorders, and offertions. The proteins can also be used to aid wound cannot, to maintain organs before transplantation, for supporting cell sunburn, to maintain organs before transplantation, for supporting cell contains of primary tissues, to regenerate tissues, to identify their contains of primary tissues, to regenerate tissues, to identify their as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                ;

AADD53100-AADD5379 represent cDNAs corresponding to 28 human secreted correcting genes, and AAED1436-AAED1513 represent the proteins they encode. protein genes, and AAED1436-AAED1513 represent the proteins they encode. CC AAED1514-AAED1544 represent human secreted protein fragments or variants. They genes and their secreted proteins are useful for preventing. They genes and their secreted proteins, e.g., by protein or gene treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the communition in the new genes. Specific uses are described for each of the much of the new genes. Specific uses are described for each of the include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental and include developing products for the diagnosis of the immune system, and include developing products for the dispass of the immune system, altory autoimmune diseases (e.g., rheumatoid arthritis), inflammation, alteryles, neurological disorders, schizophrenia, asthma, contractive in disorders (e.g., psorlasis), sepsis, diabetes, atheroselerosis, carteriar disorders (e.g., psorlasis), sepsis, diabetes, atheroselerosis, carteriar and developing representation and disorders, kidney disorders, endocrine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  distributes that disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin adjung due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemicaris, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., redsint sequence represents a human secreted protein of the invention of nearly human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RTASVIJALTDGELHEDLEFYSERBANKSRDLGAIVYCVGVKDFNETGLARIADSKDHVF 120

The present sequence represents a human TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. THE TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any won Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular interactions, modulate cell adhesion in proliferation, modulate cellular interactions, modulate the proliferation, differentiation, differentiation, differentiation, differentiation, differentiation, differentiation, differentiation, differentiation, differentiation of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematropoletic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disorders, treat cardiovascular disorders such as ischemic heart disorders, they may also be used to treat disorders associated with the covaries, cerebral oedema, bydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, latrogenic disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, disorders, hydrocephalus and encephalitis, and treat hepatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TANGO 266; TANGO 216;; TANGO 261; TANGO 267; cellular proliferation; cellular adhesion; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiacistinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; hillahmistion; disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 267, and TANGO 267. The TANGO CC describes TANGO 267, The TANGO CC pollypeptides can be used to medulate cellular adhesion. The cellular differentiation and/or modulate cellular adhesion, and the second and the cell trafficking and/or migration, modulate cellular interactions, and cell trafficking and/or migration, modulate cellular interactions, computate cell adhesion in proliferative disorders, such as cancer, that appear in the bone marrow, and leukocytes, treat bone marrow, blood conditions of cellular interactions, and hematopoietic associated diseases and disorders, atelectasis, and hematopoietic associated diseases and disorders, spheen associated associated diseases, modulate renal disorders, treat cardiovascular disorders as is schemic heart disorders, intestinal disorders, spheen associated diseases, modulate the proliferation, differentiation, and for treat bone and or cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to botten and viral menigitis, Alzheimer's Disease, inflammations, hadrochalus, brain herniations, introgenic disease, inflammations, hydrocephalus, brain herniations, introgenic disease, inflammations, hydrocephalus, brain herniations, and treat hepatic disorders. Hydrocephalus and encephalitis, and treat hepatic disorders. In once: the present sequence does not appear in the specification; it was consisted using information provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVGVKDFNETQLARIADSKDHVF 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PVNDGFQALQGIIHSILKKSCIEILAAEPSTICAGESFQVVVRGNGFRHARNVDRVLCSF 180

ABB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 260 cellular differentiation and/or modulate proliferation, modulate polypeptides can be used to modulate cellular adhesion. The cellular differentiation and/or modulate cellular adhesion, disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, and cell trafficking and/or migration, modulate cellular interactions, condulate the proliferation of disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells cand hematopoietic associated diseases and disorders, atelectasis, bronchial pulmonary congestion or oedema, emphysema, chronic bronchial, bronchial cases, modulate renal disorders, spleen associated diseases, modulate the proliferation, differentiation, as ischemic heart disease, modulate the proliferation, differentiation, as ischemic heart diseases or disorder. They may also be used to cartilage associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, jatrogenic disease, cerebral concephalus, brain meningitis, Alzheimer's bisease, inflammations, bydrocephalus and encephalitis, and treat hepatic disorders. They may also be used to concert the present sequence does not appear in the specification; it was received with rich are all the present sequence does not appear in the specification; it was received.
                                                                             TANGO 266; TANGO 216;; TANGO 261; TANGO 267;
cellular proliferation; cellular differentiation; cellular adhesion;
von Willebrand factor-associated disorder; cell trafficking; cancer;
homatopoletic associated disease; atelectasis; pulmonary congestion;
oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis;
intestinal disorder; spleen associated disease; renal disorder;
cardiovascular disorder; ischemic heart disease; hydrocephalus;
brain herniation; iatrogenic disease; inflammation; meningitis;

be administered to treat diseases by gene therapy. Antisense molecules may be administered to down regulate expression of SPs by binding with the cells own genes and preventing their expression. The polynuclectides may also be used as DNA probes in diagnostic assays. The SPs may also be used as natigens to produce antibodies and to identify modulators and antagonists of the SPs. The anti-(SP) antibodies and antagonists and antagonists of the SPs. The anti-(SP) antibodies and antagonists and also be used to down regulate expression and activity of SP and as diagnostic agents for detecting the presence of SPs in samples. The disorders include for example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and Caucher's disease), neurological diseases (e.g. Alzhaimer's disease, Parkinson's disease) neurological diseases (e.g. Alzhaimer's disease, e.g. Parkinson's disease) cardio-/cerabrovascular disorders (e.g. cardiac arrest, tachycardia and angina), infections caused by bacteria, viruses and hyberomy has incomed and maintenance of corneal infections.

disorders, atclectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial asthma and bronchicetasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, cerebral oedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's bisease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, bisean cancers, hydrocephalus and encephalitis, and treat hepatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a murine TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO DOLYPEPTIGES can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 RTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVGVKDFNETQLARIADSKDHVF 120

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 267, TANGO 262, and TANGO 267. The TANGO CC describes TANGO 267, TANGO 267, TANGO 267, TANGO 267, The TANGO CC polypeptides can be used to modulate cellular adhesion. The cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, compulate the proliferation proliferation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, compunenty congestion or oredema, emphysema, chronic bronchitis, bronchial confidency of associated diseases and disorders, sphen associated disease, and cardiovascular disorders such associated disease, the proliferation, differentiation, as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated disease, and cartilage cells and to treat bone and varies, and cerebral oedema, hydrocephalus, brain herniations, introgenic disease, inflammations, corpusamosis, parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

C toxplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions,

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO cellular believation and/or modulate cellular proliferation, modulate cellular adhesion. The proteins can be used to creat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell dimesion in proliferative disorders, such as cancer, and tappear in the bone marrow, and leukocytes, treat bone marrow, blood conditions to cedema, emphysema, chronic bronchitis, bronchial as the matopoietic associated diseases and disorders, spleen associated asthma and bronchiectasis, intestinal disorders, spleen associated associated diseases, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or and/or function of bone and cartilage cells and to treat bone and/or treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bydrocephalus and encephalitis, and treat hepatic disorders.

Contribused associated with the ovaries, encebral cancers, bydrocephalus and encephalitis, and treat hepatic disorders.

Contribused associated does not appear in the specification; it was and and an analyzed of the and an analyzed of the and an analyzed of the analyz
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 RTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVGVKDFNETQLARIADSKDHVF 120

Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host disease, rheumatoid arthritis, psoriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachexia and autoimmune disease, e.g. myasthemia gravis, autoimmune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial cransgenic animals and the TANGO polypeptides themselves. Partial for processic biology, for diagnostic assays, prognostic assays, pharmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic polypeptides are suitable for both prophylactic and therapeutic disorder associated with aberrant TANGO expression. A wide range cellular disorders can be treated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
graft versus-host diseases; rheumatoid arthritis; psoriasis; inflammatory bowel disease; septic shock; ulcerative colitis; crohn's disease; chronic myelogenous leukemia; cancer; liver disease; Hodgkin's disease; osteoarthritis; Lyme's disease; cachexia; autoimmune disease; myasthemia gravis; autoimmune disease; systemic lupus erythematosus; transgenic animal; diagnosis; prophylatic; therapeutic; mouse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 8; Fig 27; 209pp; English
